Human reactive mechanisms to a change in the state of the Earth system
Rx
R×
x
Direct human impact from Absolute environmental sustainability assessment
d
+
Total impact on the Earth system
h
+
State of the Earth system control variables
x
Biophysical interactions can amplify or stabilise the state of the Earth system
Bx
B×
x
d

PRx
PR
x
Impact on an Earth system process is associated with parallel impacts on other biophysical systems
The state of the control variables is influenced by human reactive mechanisms and associated parallel human reactive mechanisms
